

MODERN

The main features of this board are the contour rail stringers and the SLX construction. The Stringers are not made of your traditional wood but instead we have used heavy duty fibreglass laminated vertically parallel with the rails of the board. This gives the board a different, more alive feel. The second feature you will notice is the exaggerated bottom contours; this board is more like a high performance shortboard when you turn it over. A deep full length concave that flows into sculptured concave vee tail give the board an exciting ability to turn as soon as you want it to. The SLX construction provides a superlight weight responsive Longboard. Finally we have given you the option to ride the board with three different fin set ups. First as a quad set up, second as a 2 + 1 and finally as a single fin. We also opted for the rounded pin tail as it was more performance orientated.

All boards are glassed with epoxy with a 2 x 6oz on deck and 1 x 4oz bottom with a 6oz patch on the fin area. We give the boards the gloss polish finish and they come standard with 8" Centre fin and FCS GL fins.
